WORK EXPERIENCE

- **Valeo** Cairo, Egypt
Software Engineer Jan 2025 – Present
 - Engineered robust Jenkins CI/CD pipelines to enforce regulatory-compliant validation checks (e.g., ASPICE/ISO), ensuring high-reliability standards across automotive software releases.
 - Architected an end-to-end CI/CD observability stack using OpenTelemetry, Loki, and Grafana, centralizing Jenkins pipeline logs and distributed traces to reduce build troubleshooting time by 60%.
 - Integrated AI agents with the observability platform to perform automated root cause analysis on Jenkins build logs, providing developers with real-time, actionable code fixes and accelerating MTTR.
 - Developed custom automation tools and reporting modules in Python and Go, streaming aggregated QA data into Google BigQuery to eliminate manual workflows and reduce report analysis time by over 60%.
 - Engineered modular Ansible roles to automate infrastructure provisioning across 800+ remote machines, achieving 100% configuration parity and eliminating configuration drift.
- **Valeo** Cairo, Egypt
Embedded HiL Testing Engineer Aug 2022 – Jan 2025
 - Developed and executed HIL validation test cases for DC-DC converters and OBCs for major automotive clients including Ford, BMW, and Daimler, using dSPACE and Vector CANoe.
 - Identified, documented, and tracked system-level bugs using Polarion ALM, collaborating with development teams to ensure timely resolution and verification of fixes.
 - Analyzed system and software requirements to create and update test specifications, enhancing test coverage and validation effectiveness for new product features.
 - Reduced bug resolution time by 40% through direct collaboration with developers.

EDUCATION

- **Georgia Institute of Technology** Atlanta, GA
Master of Science in Computer Science Expected Fall 2028
- **Misr International University** Cairo, Egypt
B.Sc. in Electronics and Communication Engineering – Cum. GPA: 3.59 Graduated July 2022
 - **Graduation Project:** Led the design and implementation of a satellite communication system, developing communication management software using AX.25 and SSP protocols.

SKILLS

- **DevOps & Automation:** Jenkins, OpenTelemetry, Loki, Grafana, AWS, Ansible, CI/CD, Docker, Kubernetes, Git
- **Programming Languages:** Python, Go, Groovy, C

CERTIFICATIONS & COURSES

- **Full Embedded Systems Diploma:** Covered C programming, Data Structures, AVR microcontrollers, RTOS, and Embedded Software Engineering Principles (Oct 2021).
- **Satellite Communication Subsystem Course:** Implemented the AX.25 protocol in LabVIEW and built a wireless data transmission system using Arduino and nRF modules (Sept 2021).
