WORK EXPERIENCE

- **Valeo** Cairo, Egypt
SDE Engineer Jan 2025 – Present
 - Engineered and maintained modular Jenkins pipelines for CI/CD, orchestrating pre-merge static analysis checks with tools like VectorCAST, Polyspace, and Klocwork
 - Developed custom reporting tools for Jenkins pipelines to aggregate data from multiple QA sources, reducing report analysis time for developers and leadership by over 60%
 - Authored configurable Ansible playbooks to automate the deployment and version management of software tools across multiple HIL machines, ensuring consistent project environments
 - Automated the deployment and integration of new CANPanel and dSPACE HILModel releases, streamlining the test environment setup for runtime validation
- **Valeo** Cairo, Egypt
Embedded HiL Testing Engineer Aug 2022 – Jan 2025
 - Developed and executed HIL validation test cases for DC-DC converters and OBCs for major automotive clients including Ford, BMW, and Daimler, using dSPACE and Vector CANoe
 - Identified, documented, and tracked system-level bugs using Polarion ALM, collaborating with development teams to ensure timely resolution and verification of fixes
 - Analyzed system and software requirements to create and update test specifications, enhancing test coverage and validation effectiveness for new product features
 - Interacted directly with developers to report and clarify issues found during test execution, improving the feedback loop and quality of the final product

SKILLS

- **DevOps & Automation:** Jenkins, Ansible, Git, GitHub, CI/CD, Test Automation, Docker, Kubernetes, AWS
- **Software & Tools:** dSPACE, Vector CANoe, Polarion, Klocwork, Polyspace, VectorCAST, Linux
- **Programming & Technical:** Python, Go, C

EDUCATION

- **Misr International University** Cairo, Egypt
B.Sc. in Electronics and Communication Engineering – Cum. GPA: 3.59 Graduated July 2022
 - **Graduation Project:** Led the design and implementation of a satellite communication system, developing communication management software using AX.25 and SSP protocols

CERTIFICATIONS & COURSES

- **Full Embedded Systems Diploma:** Covered C programming, data structures, AVR microcontrollers, RTOS, and embedded software engineering principles (Oct 2021)
- **Satellite Communication Subsystem Course:** Implemented the AX.25 protocol in LabVIEW and built a wireless data transmission system using Arduino and nRF modules (Sept 2021)
