WORK EXPERIENCE

- **Valeo** Cairo, Egypt
Software Development Engineer (SDE) Jan 2025 – Present
 - Engineered robust Jenkins CI/CD pipelines to orchestrate regulatory-compliant checks (e.g., ASPICE/ISO), ensuring high-reliability validation standards.
 - Developed custom reporting tools to aggregate QA data within Jenkins, reducing report analysis time for developers and leadership by over 60%.
 - Enhanced pipeline observability by embedding custom logging scripts within Jenkins, streaming data to BigQuery to create dashboards for long-term trend analysis.
 - Authored configurable Ansible playbooks to automate tool provisioning across 800+ HIL machines, eliminating configuration drift and ensuring identical environments.
 - Executed major migrations impacting 2,000+ repositories, while ensuring zero downtime and a seamless transition for the development team.
- **Valeo** Cairo, Egypt
Embedded HiL Testing Engineer Aug 2022 – Jan 2025
 - Developed and executed HIL validation test cases for DC-DC converters and OBCs for major automotive clients including Ford, BMW, and Daimler, using dSPACE and Vector CANoe.
 - Identified, documented, and tracked system-level bugs using Polarion ALM, collaborating with development teams to ensure timely resolution and verification of fixes.
 - Analyzed system and software requirements to create and update test specifications, enhancing test coverage and validation effectiveness for new product features.
 - Interacted directly with developers to report and clarify issues found during test execution, improving the feedback loop and quality of the final product.

SKILLS

- **DevOps & Automation:** Jenkins, Ansible, Git, GitHub, CI/CD, Test Automation, Docker, Kubernetes, AWS
- **Programming Languages:** Python, Go, C

EDUCATION

- **Misr International University** Cairo, Egypt
B.Sc. in Electronics and Communication Engineering – Cum. GPA: 3.59 Graduated July 2022
 - **Graduation Project:** Led the design and implementation of a satellite communication system, developing communication management software using AX.25 and SSP protocols.

CERTIFICATIONS & COURSES

- **Full Embedded Systems Diploma:** Covered C programming, data structures, AVR microcontrollers, RTOS, and embedded software engineering principles (Oct 2021).
- **Satellite Communication Subsystem Course:** Implemented the AX.25 protocol in LabVIEW and built a wireless data transmission system using Arduino and nRF modules (Sept 2021).
